JOB DESCRIPTION

- Diagnosing and treating patients with urological conditions, such as urinary tract infections, kidney stones, bladder and prostate cancer, erectile dysfunction, infertility, and urinary incontinence.
- Developing and implementing individualized treatment plans based on diagnosing and assessing patients' needs, including prescribing medications, recommending surgical interventions, or providing non-surgical interventions.
- Performing various urological procedures, including cystoscopies, minimally invasive surgeries, open surgeries and laser treatments, to treat urological conditions and improve patients' health outcomes.
- Providing counseling and education to patients and their families regarding their condition, treatment options, and preventive measures to promote urological health.
- Maintaining accurate and up-to-date medical records, including patient information, examination findings, test results, and treatment plans, in compliance with legal and ethical standards.
- Keeping abreast of advancements in the field of urology through attending conferences, participating in continuing medical education activities, and reading relevant scientific literature.
